The amendment of 2/6/06 has been entered. Claims 1-24 are pending.

2. Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Page 2

The instant claims recite "by weight" regarding the percentages of the instant claims A. 1, 3, 4, 7, and 9. There is not basis seen for the recitation of "by weight". Pages 18 and 19 are not seen as the instant specification ends at page 16. The examples are not commensurate in scope with the instant claims and therefore do not provide basis for the entire scope of the instant claims.

- There is not basis for the newly recited "emulsifying a monomer mixture comprising the monomers of the polyadduct and the monomers of the polymer with water". Pages 18 and 19 are not seen as the instant specification ends at page 16. The examples are not commensurate in scope with the instant claims and therefore do not provide basis for the entire scope of the instant claims.
- There is not basis for the particle size range of the instant claim 22. Pages 18 and 19 are not seen as the instant specification ends at page 16. The examples are not commensurate in scope with the instant claims and therefore do not provide basis for the entire scope of the instant claims.

Application/Control Number: 10/525,941 Page 3

Art Unit: 1714

D.

There is not basis for the newly presented claims 23-24 because the examples do

not show such limited mixtures of monomers which are commensurate in scope with the instant

claims 23-24.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in

this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all 4.

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 1-5, 7-8, and 18-22 are rejected under 35 U.S.C. 102(b) as being anticipated

by DE 10018601 as translated by US Pat. Application Pub. No. 2003/0143414 Bendix et al..

Examples 1-3 of sections [00115] through [0125] disclose addition polymerizing monomers

in the presence of blocked isocyanates and water using miniemulsion conditions at temperatures

of 70-80C (section [0118]) and 130C (section [0120] foot note d). At these temperatures, by the

equilibrium of the deblocking reaction, some of the NCO is expected to have deblocked and

reacted with water in the emulsion or OH groups of the addition polymer which will be a

polyurethane "polyadduct". As the NCO groups are blocked at room temperature, it is expected

that less than 5% or less than 40% of them reacted by any basis. The resulting product falls

within the scope of the instant claims 1-5. The proportions are expected to be within the broad

Application/Control Number: 10/525,941

Art Unit: 1714

range of the instant claim 8 necessarily and inherently. The method of Bendix falls within the scope of the instant claims 9-10 and 12-15. The binder of claims 15-17 and the coated substrates and the necessary coating method read on the instant claims 18-21. The applicant has provided no evidence that the composition of Bendix does not fall within the scope of that of the instant claims even thought the processes appear to differ somewhat. The instant claims are directed to the final compositions, not the methods of making them. Section [0022] encompasses new claim 22.

6. Claims 6, 9-17, and 23-24 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, First paragraph, set forth in this Office action.

There is not motivation to perform the inventions of the instant claims 6, 11, and 16-17 in the prior art nor to modify Bendix's invention into the inventions of these claims.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick D. Niland whose telephone number is 571-272-1121. The examiner can normally be reached on Monday to Thursday from 10 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on 571-272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
